

# JavaScript Math

CSS transform

# box class

# Math.atan2()

The Math.atan2() function returns the arctangent of the quotient of its arguments.

```
function calcAngleDegrees(x, y) {  
    return Math.atan2(y, x) * 180 / Math.PI;  
}
```

```
console.log(calcAngleDegrees(5, 5)); //expected output: 45
```

```
console.log(calcAngleDegrees(10, 10)); //expected output: 45
```

```
console.log(calcAngleDegrees(0, 10)); //expected output: 90
```

[https://developer.mozilla.org/en-US/docs/Web/JavaScript/Reference/Global\\_Objects/Math/atan2](https://developer.mozilla.org/en-US/docs/Web/JavaScript/Reference/Global_Objects/Math/atan2)

# Math.sin()

The Math.sin() function returns the sine of a number.

```
function getCircleY(radians, radius) {  
  
    return Math.sin(radians) * radius;  
  
}
```

```
console.log(getCircleY(1, 10));// expected output: 8.414709848078965
```

```
console.log(getCircleY(2, 10));// expected output: 9.092974268256818
```

```
console.log(getCircleY(Math.PI, 10));// expected output: 1.2246467991473533e-15
```

[https://developer.mozilla.org/en-US/docs/Web/JavaScript/Reference/Global\\_Objects/Math/sin](https://developer.mozilla.org/en-US/docs/Web/JavaScript/Reference/Global_Objects/Math/sin)

# Math.cos()

The `Math.cos()` static function returns the cosine of the specified angle, which must be specified in radians. This value is  $\frac{\text{length adjacent}}{\text{length hypotenuse}}$ .

```
function getCircleX(radians, radius) {  
    return Math.cos(radians) * radius;  
}
```

```
console.log(getCircleX(1, 10));// expected output: 5.403023058681398
```

```
console.log(getCircleX(2, 10));// expected output: -4.161468365471424
```

```
console.log(getCircleX(Math.PI, 10));// expected output: -10
```

# transform CSS

The **transform** CSS property lets you rotate, scale, skew, or translate a given element. This is achieved by modifying the coordinate space of the CSS **visual formatting model**.

 **CSS Demo: transform** Reset

```
transform: matrix(1, 2, 3, 4, 5, 6);
```

```
transform: translate(120px, 50%);
```

```
transform: scale(2, 0.5);
```

```
transform: rotate(0.5turn);
```

```
transform: skew(30deg, 20deg);
```

```
transform: scale(0.5) translate(-100%, -100%);
```
